Since See No. 20 of the bibliography at the end of lecture 6. t Bibliography, No. 26a. J Laguerre (loc. cit.) gives the function first in the form of a continued fraction and later proves its identity with the integral which gives rise to the divergent Beries. Borel at the opening of the second chapter of Les Series divergenies remarks that Laguerre parait avoir le premier montre nettement 1 utilit qu il peut y avoir a transformer une aerie divergente. en une fraction continue convergente. It seems almost to have escaped notice (see, however, p. 110 of Pringsheim s report, Encyklopiidie der Math. Wissenschaften, I A 3), that Euler (Bibliography, No. 46) derived a continued fraction from the divergent series of which laguerre s series is a special case, and clearly realizes the utility of the continued fraction. Moreover, a close parallel to the course followed by Laguerre is found in the work of Laplace who derives from the expression a divergent series and from this in turn a continued fraction, the convergents of which were stated by him and proved by Jacobi to be alternately greater and less than the expression. Had Jacobi proved also the convergence of the continued fraction, the work of Laguerre would have had an exact parallel for real values of i. Cf. No. 47 of the bibliography. The function thus derived is an improper integral which has a significance for all values of x except...
