## ADVANCED MANUFACTURING TECHNOLOGY

To download **Advanced Manufacturing Technology** eBook, please access the button below and download the document or get access to additional information that are related to ADVANCED MANUFACTURING TECHNOLOGY book.

2015. Soft cover. Book Condition: New. 1st Edition. Computers are influencing changes in the way manufacturing enterprises carry out their business operations and manage production functions. Computers aid in planning for the accomplishment of objectives through effective management. They assist in planning and establishing exactly where, how, and when various activities that are part of a long-term program are carried out. They help planners produce optimized schedules; improve production line efficiency, and use manufacturing resource planning; MRP II; which is a formal system for planning and managing a production function's resources. The use of computers has gone beyond the calculation of payroll or the fancy electric typewriter that can produce reports by the tons of paper. Computers are now contributing to the relief of many labor intensive tasks and, with intricate programs; assisting the design process and the automation of the factory. Computers are changing the internal structure of manufacturing organizations; their methods of operations; and their external relationship to society. They assist in all manufacturing operations. In this scenario; all actions occur in engineering where new products are conceived and then presented to potential customers. The computer has a key role; and computer graphics is a core tool. It is normal practice in conceptual or preliminary design to make iteration after iteration to develop a product. Analysis and simulation methods also draw on the computer for support. A serviceable graphics software package provides these capabilities; or it interfaces to the programs that will provide these capabilities. When a concept is sold to a customer, program control develops master schedules and budgets for all functions of the project. Production design then puts the flesh on the skeletal concept. Manufacturing engineering prepares the tool plan and the process plan. Procurement orders material as defined on bills of material; BOM. Tool design prepares designs to fulfill the manufacturing plan and tool manufacturing builds the tools. Then production control issues fabrication and assembly orders to make sure that the proper tools are in the right place at the right time...
