South African Botany

By F. W. Storey

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 44 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1916 edition. Excerpt: . . . easy to determine if a plant is wind pollinated (entomophilous). Such plants have small inconspicuous flowers. They produce large quantities of dry powdery pollen, and have large hairy stigmas. Many flowers which are wind pollinated come out before the leaves, so that the pollen grains have free access to the stigmas, e. g. Hazel, Oak; others, e. g. Mealie, have the inflorescence well above the vegetative shoot. Wind-pollinated flowers found in South Africa are Oak, Hazel, Castor Oil, Mealie, and numerous grasses. 76. Entomophilous Flowers. -- Entomophilous (insect pollinated) and ornithophilous (bird pollinated) flowers are far more numerous. They usually have large, conspicuous and highly coloured corollas, or are arranged in showy inflorescences. Some, e. g. Bougainvillea and Poinsettia have large highly coloured bracts, others, e. g. Mimosa, make themselves attractive to insects by their conspicuous and numerous stamens. Many are sweetly scented, and secrete honey....
