

## Alternating Dimension Plasma Transport in Three Dimensions (Classic Reprint)

Filesize: 4.47 MB

### ***Reviews***

*Great e book and beneficial one. It is amongst the most awesome pdf i actually have read through. You wont feel monotony at at any time of your own time (that's what catalogs are for relating to if you request me).*

*(Dorothy Daugherty)*

Forgotten Books. Paperback. Condition: New. This item is printed on demand. 32 pages. Dimensions: 9.0in. x 6.0in. x 0.1in. Excerpt from Alternating Dimension Plasma Transport in Three Dimensions Abstract The alternating dimension (1 1/2 D) method of solving macroscopic adiabatic and transport problems is here generalized to arbitrary 3-D toroidal plasma confinement systems. The principal new result is the derivation of an evolution equation for the poloidal and toroidal fluxes in which second derivatives can be explicitly exhibited to show that the system is diffusive. This extends previous results in 2-D, axial symmetry and helical symmetry, where the flux functions for the magnetic field are explicit consequences of an ignorable coordinate, and the EBT closed magnetic line configuration. The eigenvalues (diffusion coefficients) are evaluated and are shown to represent one-dimensional relative diffusion among the adiabatic variables, independent of the representation (e. g. whether diffusion is measured relative to mass, or toroidal flux, or poloidal flux). The skin effect diffusion coefficient decouples from the other coefficients and represents diffusion of one magnetic field component relative to the other. Other transport coefficients such as those for mass and energy flow are intrinsically coupled. As in previously implemented alternating dimension codes, a 3-D code built to these specifications should be expected to be extremely accurate and efficient. 1. Introduction The macroscopic evolution of a plasma is governed by some form of conservation of mass, momentum, energy and magnetic flux. In both ideal and dissipative dynamic models, each conservation law is an evolution equation with a time derivative of density, velocity, temperature, or magnetic field. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at [www.forgottenbooks.com](http://www.forgottenbooks.com) This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections...
